

About RSTOR

RSTOR is a storage system supported by CSU with several protective features, including:

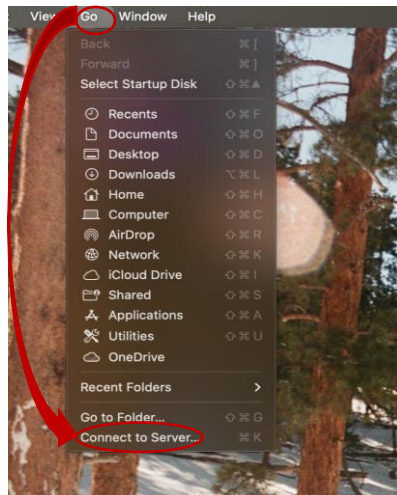

- Daily read-only snapshots available for 30 days.
- Nightly archiving that stores data in multiple locations on campus.

RSTOR is used for storage and archiving of data, allowing users to access daily read-only copies when needed.

To access RSTOR, you will need a CSU eID. If you do not have one, you need a department to sponsor a “guest associate” account with a temporary eID. Find more details about this [here](#).

How to access RSTOR (macs)

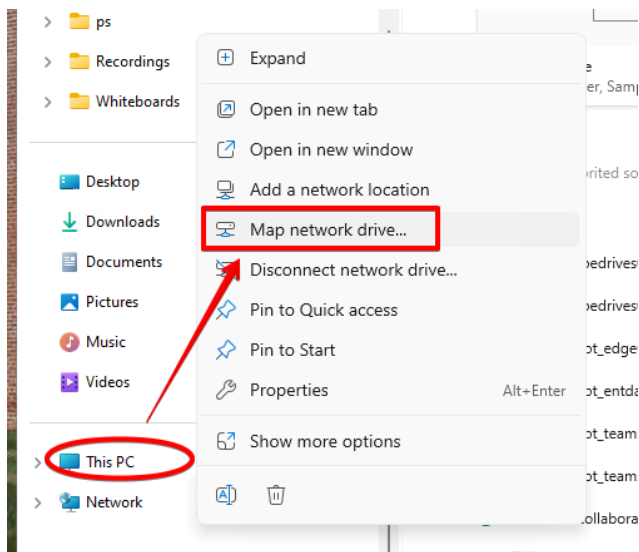

- 1) Request to be added to the access list by emailing ohi_broadn_data@colostate.edu or beth.marie.hayes@colostate.edu . It may take a few hours and a computer reset for approval to go through.
- 2) *If you are off-campus*, access the global protect VPN agent
 - i) [Directions for this](#)
- 3) Pull up Finder on computer
- 4) Once finder is open, use “Go” drop down from menu to find “Connect to server”

- 5) Select the “Connect to server” option
- 6) This will prompt the entry of a server
- 7) Enter following server address
